- As a future computer engineer, I present myself to this project, since I see myself with sufficient capacities to approach this one thanks to my learning in other works, in which I have obtained an excellent qualification, for my enormous commitment carried out in these.

- Before this project I made others with similar language and technology. The most important have been:
  I. **GamUS Four** (https://gamus-four.appspot.com/), a web application for video game information in which we find trailers, prices, and recommendations of them, in addition to being able to comment on Twitter and Blogger. All this thanks to the use of Java 7, JavaScript, CSS, OAuth 1 and OAuth 2 in a period of 3 months.
  II. **Tecnovial**, database management application for a driving school, with which you will be able to manage all the movements of the school, for example, adding a student, pointing him to an exam or taking the timetable of classes. All implemented with PHP, CSS, HTML, SQL and JavaScript in a period of 6 months.

- I studied primary school in Hermelinda Nuñez, and, the secondary school and the technological A levels in High Studies Level Albero, located in Alcalá de Guadaira, where I obtained excellents qualifications that allowed me to accede to the university career of Computer Engineering in Seville.

- The programming languages I know, and with which I have worked are Java, JavaScript, SQL, HTML, CSS, PHP, short knowledge about Python and C++. On other side, I have also worked with the game engine, Unity.
- I use the main language Spanish and I have a medium level of English, not certified.
