Recruitment advertisement

The objective of our project is the creation of several information systems with the use of different technologies such as MySQL, TomCat 7, Hibernate 4, Java, Virtual Box and Eclipse mainly just to others on a smaller scale. Each of these systems will have an average duration of 2 weeks which will end with an eliminatory deliverable. The members of the development team will distribute the work of each of these deliverables equally, which will be distributed by the manager of the team.

For this project we are looking for people with the ability to:

- Design, develop and implement software systems
- Desire to work
- Problem solving initiative
- Ability to work in a team
- Responsibility and commitment

If you meet the requirements set out in the document, you can contact across:
