As a third-year student of Software Engineering, I think that I have the necessary skills to approach this project. This conviction comes for the outstanding grades I got in two previous projects: GamUS Four and Tecnovial, thanks to the effort I put into them.

➢ -GamUS Four(https://gamus-four.appspot.com), a web app where you can search information about videogames, like his trailer, price, recommendations, title, genre etc. Also, you can post on Twitter and Blogger. In this project I learned the use of Oauth 1, Oauth 2, HTML, CSS and web-focused Java, in a 3-month period.

➢ -Tecnovial, a database management for a driving school, where you can perform all typical actions, such registering a new pupil, update the offers etc. I learned PHP, more HTML and CSS, in a 6-month period.

I studied primary in the primary school Gualdalquivir, and the Secondary Education and the High School levels in Antonio de Ulloa college, all located in La Rinconada, Seville, where I obtain excellent qualifications, which allowed me to pass the Entrance Exam and sign up in this degree.

Thanks to the projects mentioned above and a personal research, I know Java, SQL, PHP, CSS, HTML, C, JavaScript, and a little bit of C# and the Unity game engine.

My main language is Spanish, and I have medium level of English, not certified.
